

Gene Talk

The Universal Species Translator

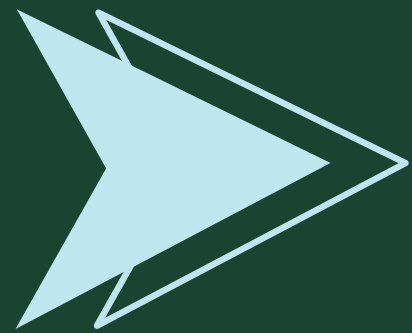

Team Name:

Street Crew

Track :

Open Innovation

Problem *Statement*

Humans can't truly communicate with other species. Animals send signals - sounds, visuals, – that we can't understand. This creates empathy gaps, confusion with pets, and limits our ability to protect nature.

Innovative *Answer*

- Analyzes sounds, gestures, and biosignals from animals and different species
- Translates them into natural human language
- Provides real-time emotional and behavioral insights
- Enables people to truly listen to other species

Tech *Features*

- Real-time sound and gesture analysis
- Species emotion detection using images
- GenAI translation engine for natural-language outputs
- Interactive dashboard with visual feedback

Unique *Advantage*

- First-ever unified translator for animals
- Multi-modal GenAI integrating sound, vision, and behavioral analysis
- Empathy-driven innovation fostering coexistence between humans and animals
- Ethical and open-source framework for global collaboration
- Continuously evolving AI that learns from every interaction

Target *Users*

- Pet owners & animal trainers
- Wildlife researchers & conservationists
- Agricultural & environmental institutions
- Educational platforms

Revenue *Streams*

- Subscription-based model API licensing for third-party integrations
- Data analytics & visualization dashboards
- Partnerships with IoT and pet-tech manufacturers

The background is a solid teal color. On the left and right sides, there are branches of an olive tree with long, narrow, green leaves. The leaves are detailed with visible veins and some slight discoloration, giving them a natural, organic appearance.
